

Demo Script

Project III - Tools for Program Development

Scenario

The presenter demonstrates how a small software team uses DevTrack to manage bugs and tasks.

Steps

1. Open the application at <http://localhost:5173>.
2. Sign in as Admin with admin@devtrack.local and [admin123](#).
3. Show the dashboard counters and project sidebar.
4. Create a new project.
5. Create a new bug or task for that project.
6. Assign it to a developer or tester.
7. Move the issue from To Do to In Progress.
8. Open the issue detail panel.
9. Add a comment.
10. Change priority or due date.
11. Use filters and search.
12. Show that activity history and dashboard statistics are updated.

Expected Result

The system demonstrates authentication, project management, issue tracking, assignment, workflow updates, comments, filtering, dashboard statistics, and traceability.
